

Type **A1** ambulance individual transport

TYPE A1 AMBULANCE

New transformation techniques for ambulances.

The CPI technology (Compact Plus Integrate) is the fusion of the used systems in lining, furniture and insulation, with the most advanced materials of the market. With it, we leave behind all the problems bringing in the use of glass fibre and polyurethane.

This process includes AA + mat, which reduces the burden of visual work to avoid reflections inside the ambulance and increases the uniformity of the surfaces. At the same time, the projection of the ecological high density polyurethane Greensir, is inserted into the structural reinforcements to form a compact unit that can integrate the furniture in the lining.

The result is a compact system with the structural properties of the fibre and all the advantages of thermoformed ABS. With the projected polyurethane, we get the insulation of the whole surface, as well as a significant reduction in weight, angles, corners and

edges. We also get a smooth surface, easy to clean, durable and without vibration.

To complete the renovation project, InvestAuto incorporates a new range of furniture Bereco, an ecological and light plywood of low density and high strength, ideal to change the style of the modular cabinet mixing shelves and separations with different thicknesses.

Remarkable features

- > Integrated air conditioning and heating.
- > Panoramic glass in the cabin separation.
- > Button panel integrated into the roof.

- > Transfers chair in the separation.
- > Bottles of oxygen on the head.
- > Spoon stretcher under the stretcher cart.

Results

- > Reduction of vibration.
- > Reduction of weight.
- > More robust and durable.
- > Ease of cleaning.
- > Reduction of corners with rounded edges.
- > Ease of assembly and disassembly.
- > 100% recovery (amortization through renting).
- > Compliance 10G according to European standards.
